PROFESSIONAL SUMMARY

Senior Software Engineer with 18+ years of experience designing and delivering enterprise-grade, cloud-native applications across the full SDLC. Specialized in Java (8/11/17/21/25), Spring Boot, Spring WebFlux (Project Reactor), and event-driven microservices on AWS (Lambda, SNS/SQS, S3, DynamoDB, Cognito) — handling 50,000+ daily transactions at 99.9% uptime in production financial and identity-validation platforms. Active AI practitioner: developed an autonomous job-application agent using Python and the Claude/Anthropic API (multi-phase orchestration, retry logic, Gmail notifications, live dashboard) and an AWS infrastructure monitor powered by Amazon Bedrock (anomaly detection, CloudWatch integration, natural-language incident summaries). Strong full-stack background with ReactJS, Next.js, TypeScript on Node.js 22; containerized deployments via Docker + Kubernetes and Jenkins CI/CD. Fluent in English, Spanish, and Portuguese.

TECHNICAL SKILLS

Backend: Java 8/11/17/21/25, Spring Boot, Spring WebFlux, Project Reactor, Spring MVC, Spring Security (JWT Validation, RBAC), Spring Cloud, Spring Data JPA/Hibernate, Reactive Programming, Microservices, Event-Driven Architecture, REST APIs, gRPC

Cloud / AWS: Lambda, SNS/SQS, S3, API Gateway, RDS, DynamoDB, Amazon Cognito, CloudWatch, IAM, Parameter Store, Amazon Bedrock; Azure AD / Entra ID (Microsoft Entra), MSAL.js

AI Engineering: AI Agents / Claude API (Anthropic), Amazon Bedrock, Python AI Orchestration, Multi-Agent Systems, Amazon Q, GitHub Copilot, Claude Code — active daily use

Frontend: ReactJS, Next.js 14, TypeScript, Node.js 22, MSAL.js, Angular, Remix, HTML5, CSS3

Databases: PostgreSQL, MySQL, DynamoDB, Redis, SQL Server, Oracle

DevOps / Quality: Docker, Kubernetes, Jenkins CI/CD, SonarQube, JUnit 5, Mockito, Postman

Architecture: Clean Architecture, SOLID, DDD, CQRS, OAuth 2.0 (PKCE · Client Credentials Flow), JWT, RBAC, AES/RSA Encryption, Event Sourcing, Saga Pattern

PROFESSIONAL EXPERIENCE

3HTP Cloud Services — Miami, FL (Remote) — December 2021 – Present

Senior Java Full-Stack Software Engineer

- Architected cloud-native financial and identity-validation microservices using Java 17/21, Spring Boot, and Spring WebFlux (Project Reactor), handling 50,000+ daily transactions across 5 distributed services with 99.9% uptime on AWS.
- Designed voice-biometric authentication for banking transactions (2023) integrating Spring Security and Amazon Cognito into the Talos identity-validation platform — zero security incidents since launch; secured 500,000+ encrypted records with AES/RSA and OAuth 2.0/JWT.
- Built event-driven microservice architectures on AWS (SNS/SQS, Lambda, DynamoDB, S3) with Redis caching, reducing asynchronous event processing latency by 35% and achieving sub-200ms API response times.
- Optimized legacy Java/Spring Boot systems (Logicalis LEX and SOLVER) using VisualVM and IntelliJ Profiler, cutting API response latency by 35% and memory footprint by 25%, eliminating recurring production SLA breaches.
- Designed distributed Complaints Management System with three Spring WebFlux reactive microservices coordinated via AWS SNS/SQS, reducing customer complaint resolution time by 40%.
- Full-stack architect on Proteccion digital savings platform — Next.js + TypeScript frontend, Spring WebFlux + Java backend on AWS — serving 200,000+ end users with sub-200ms response times and 99.9% availability.
- Containerized all microservices with Docker, deployed to Kubernetes with auto-scaling; managed Jenkins CI/CD pipelines with SonarQube quality gates, cutting deployment cycle from 45 to 12 minutes.
- Accelerated development 30%+ using Amazon Q, GitHub Copilot, and Claude Code for code generation, code review, and architecture exploration.

Cooper Tec — Brazil (Hybrid) — May 2021 – November 2021

Senior Software Engineer

- Developed and maintained online card-management systems for a leading Brazilian credit operator using PHP 8, PHPUnit, PostgreSQL, MySQL, SQL Server, Oracle, and Docker, serving 50,000+ cardholders.

- Designed AES/RSA encryption algorithm securing front-end/back-end interactions across card-management APIs, reducing unauthorized access attempts by 90% and achieving full PCI-DSS compliance.

UniCesumar — Brazil (Hybrid) December 2016 – April 2021

Senior Software Developer

- Developed and maintained large-scale academic, financial, and administrative systems (Java, Spring Boot, PHP, JavaScript, REST/SOAP APIs) for one of Brazil's largest private universities — 80,000+ students and 2,000+ faculty.
- Built two-step authentication with Google Authenticator, reducing unauthorized account access by 95%; automated multiple workflows via scheduled microservices, cutting manual processing by 60%.
- Managed CI/CD pipelines with Docker, Git, and Jenkins; introduced SonarQube quality gates that reduced production defect rate by 45%.

PERSONAL PROJECTS (OPEN SOURCE)

AI Systems Engineer

- Engineered an autonomous LinkedIn job-application agent (Python, Anthropic Claude API / Claude Agent SDK) with 4-phase orchestration: MCP-based multi-source job search, ATS-optimized resume generation via Claude Haiku, LinkedIn Easy Apply automation via Claude in Chrome, and retry logic with persistent error tracking — autonomously submitting tailored applications weekly to 50+ positions.
- Built AWS Monitor Agent — an AI-powered infrastructure monitoring system using Amazon Bedrock: intelligent EC2/Lambda/CloudWatch health analysis, anomaly detection, natural-language incident summaries, multi-region support (30+ AWS regions). 121 tests, fully serverless, <$0.02/month at rest. Live: d2gfdp4qsgu81s.cloudfront.net.
- Built Azure AD / Entra ID Auth Demo — a full-stack enterprise authentication demo (Next.js 14 + Spring Boot 3 + Spring Security) implementing OAuth 2.0 PKCE flow for browser clients and Client Credentials flow for machine-to-machine auth, with role-based access control (Admin/User), PostgreSQL/Neon persistence, and zero-cost cloud deployment (Vercel + Render). Live: azure-msal-nextjs-springboot-demo.vercel.app.
- Open-source contributor to **brunoconte3/dev-utils** — a pure PHP 8.3+ data-validation and formatting library (Packagist, 35+ stars): implemented *Compare::beginUrlWith()*, *finishUrlWith()*, *compareStringFrom()* URL-comparison utilities and *Utility::buildUrl()*; fixed bug in *validateFieldMandatory()* — all covered with PHPUnit tests, PHPStan level 10 compliant (github.com/brunoconte3/dev-utils).

EARLIER EXPERIENCE

- University Professor (Part-Time) | 2010–2016 — Universidade Metodista de Angola, Universidade Católica de Angola, Universidade Luísía (Angola) — Taught Data Structures & Algorithms, C++, Database I/II, Systems Architecture to 500+ students/year.
- Specialist B, Computer Science | Sep 2006–2010 — ETECSA, Cuba — Full-stack development (PHP, JavaScript, MySQL, PostgreSQL); built internal CMS and academic training systems (SAGEC) deployed organization-wide.

EDUCATION

Master in Business Informatics Havana, Cuba · 2013

CUJAE (Technological University José Antonio Echeverría)

B.Sc. in Computer Sciences Santiago de Cuba · 2006

University of Santiago de Cuba

CERTIFICATIONS

- AWS Partner Business Accreditation (Amazon Web Services)
- AWS Partner Technical Accreditation (Amazon Web Services)
- AWS Certified AI Practitioner (AIF-C01) — Active 2026 · Verify on Credly ↗
- AWS Certified Developer – Associate — in progress

ADDITIONAL INFORMATION

Work Authorization: Authorized to work in the USA — no sponsorship required · **Languages:** English (fluent) · Spanish (native) · Portuguese (fluent)

Location: Remote preferred; open to on-site within 28 miles of Hialeah FL 33015 · **Notice Period:** 1 month
